ACADEMIC PROJECTS

Gym Management System (ASP.NET, C#, MySQL)

- This is an integrated management system, for fitness centers, that streamlines business administration and client interaction. The system manages users and roles, enables the registration of personalized workout routines, appointment scheduling, access to group classes, and payment management. With flexible options for different membership types.

Academic System (JavaScript, HTML/CSS)

- This web application streamlines the process of gathering essential information from various educational institutions, helping parents make well-informed decisions when selecting academic options for their children. It provides a centralized platform where users can compare schools based on key criteria such as academic programs, extracurricular offerings, tuition fees, and student performance.

Delivery App (React Web, Node.js)

- This package shipment management platform streamlines the logistics of package deliveries by offering a comprehensive solution for managing transport registrations, route assignments, and approvals. It facilitates the seamless integration of package shipments with their associated transports.

Portfolio Web(React, TypeScript, Vite, Tailwind)

- A modern personal portfolio website showcasing projects, skills, and professional background. Built with a responsive UI and clean component architecture to deliver a fast, accessible, and visually engaging user experience.
